Pyruvate Kinase Activity Assay Kit

Catalog Number: EK0198

Product Size: 1 KT

Price: Online Inquiry

Product Information	
Storage Temperature	−20°C
Shipping Conditions	Gel ice pack.
Detection Method	Colorimetric or fluorometric.
Usage	Sufficient for 100 colorimetric or fluorometric tests.
Description	Pyruvate kinase (PK) can catalyze the transfer of a phosphate group from phosphoenolpyruvate (PEP) to ADP, which is the final step of glycolysis. The detects in pyruvate kinase expression or activity are associated with the second most common cause of hemolytic anemia known as pyruvate kinase deficiency. Pyruvate Kinase Activity Assay Kit can be used to measure the activity of PK in various biological samples, such as tissues, cells, and blood.
