Gene Information	
Gene Official Full Name	SRY-box transcription factor 7provided by HGNC
Gene Description	This gene encodes a member of the SOX (SRY-related HMG-box) family of transcription factors involved in the regulation of embryonic development and in the determination of the cell fate. The encoded protein may act as a transcriptional regulator after forming a protein complex with other proteins. The protein may play a role in tumorigenesis. A similar protein in mice is involved in the regulation of the wingless-type MMTV integration site family (Wnt) pathway. [provided by RefSeq, Jul 2008]
Expression	Broad expression in placenta (RPKM 14.9), lung (RPKM 8.3) and 19 other tissues See more
