Gene Information	
Gene Official Full Name	WD repeat domain 26 provided by HGNC
Also known as	CDW2; GID7; MIP2; SKDEAS
Gene Description	This gene encodes a member of the WD repeat protein family. WD repeats are minimally conserved regions of approximately 40 amino acids typically bracketed by gly-his and trp-asp (GH-WD), which may facilitate formation of heterotrimeric or multiprotein complexes. Members of this family are involved in a variety of cellular processes, including cell cycle progression, signal transduction, apoptosis, and gene regulation. Two transcript variants encoding two different isoforms have been found for this gene. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in bone marrow (RPKM 30.1), esophagus (RPKM 28.6) and 25 other tissues See more
