Gene Information	
Gene Official Full Name	coenzyme Q8Bprovided by HGNC
Also known as	ADCK4; NPHS9
Gene Description	This gene encodes a protein with two copies of a domain found in protein kinases. The encoded protein has a complete protein kinase catalytic domain, and a truncated domain that contains only the active and binding sites of the protein kinase domain, however, it is not known whether the protein has any kinase activity. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Sep 2011]
Expression	Ubiquitous expression in prostate (RPKM 8.5), testis (RPKM 8.4) and 25 other tissues See more
