Gene Information	
Gene Official Full Name	SH3 domain containing ring finger 1 provided by HGNC
Also known as	POSH; RNF142; SH3MD2
Gene Description	This gene encodes a protein containing an N-terminus RING-finger, four SH3 domains, and a region implicated in binding of the Rho GTPase Rac. Via the RING-finger, the encoded protein has been shown to function as an ubiquitin-protein ligase involved in protein sorting at the trans-Golgi network. The encoded protein may also act as a scaffold for the c-Jun N-terminal kinase signaling pathway, facilitating the formation of a functional signaling module. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in thyroid (RPKM 11.9), stomach (RPKM 11.2) and 24 other tissues See more
