Gene Information	
Gene Official Full Name	ATPase phospholipid transporting 8B2provided by HGNC
Also known as	ATPID
Gene Description	The protein encoded by this gene belongs to the family of P-type cation transport ATPases, and to the subfamily of aminophospholipid-transporting ATPases. The aminophospholipid translocases transport phosphatidylserine and phosphatidylethanolamine from one side of a bilayer to another. Alternatively spliced transcript variants encoding different isoforms have been identified. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in ovary (RPKM 16.7), endometrium (RPKM 13.3) and 23 other tissues See more
