Gene Information	
Gene Official Full Name	dynein regulatory complex subunit 11 provided by HGNC
Also known as	IQCA; IQCA1; 4930465P12Rik
Gene Description	The protein encoded by this gene is a member of the ATPases Associated with diverse cellular Activities (AAA) superfamily. Members of this superfamily, found in all organisms, participate in a large number of cellular processes and contain the ATPase module consisting of an alpha-beta-alpha core domain and the Walker A and B motifs of the P-loop NTPases. Alternative splicing results in multiple transcript variants that encode different protein isoforms. [provided by RefSeq, Jul 2012]
Expression	Biased expression in thyroid (RPKM 10.5), brain (RPKM 3.7) and 10 other tissues See more
