Gene Information	
Gene Official Full Name	sterile alpha motif domain containing 9provided by HGNC
Also known as	NFTC; OEF1; OEF2; DRIF1; C7orf5; M7MLS2; MIRAGE
Gene Description	This gene encodes a sterile alpha motif domain-containing protein. The encoded protein localizes to the cytoplasm and may play a role in regulating cell proliferation and apoptosis. Mutations in this gene are the cause of normophosphatemic familial tumoral calcinosis. Alternate splicing results in multiple transcript variants that encode the same protein.[provided by RefSeq, Jul 2010]
Expression	Broad expression in esophagus (RPKM 24.7), spleen (RPKM 9.8) and 18 other tissues See more
