Gene Information	
Gene Official Full Name	SH3 domain containing kinase binding protein 1 provided by HGNC
Also known as	HSB1; AGMX2; CIN85; GIG10; HSB-1; IMD61; MIG18; CD2BP3
Gene Description	This gene encodes an adapter protein that contains one or more N-terminal Src homology domains, a proline rich region and a C-terminal coiled-coil domain. The encoded protein facilitates protein-protein interactions and has been implicated in numerous cellular processes including apoptosis, cytoskeletal rearrangement, cell adhesion and in the regulation of clathrin-dependent endocytosis. Alternate splicing results in multiple transcript variants encoding distinct isoforms. [provided by RefSeq, Jul 2017]
Expression	Ubiquitous expression in lymph node (RPKM 19.2), fat (RPKM 15.0) and 24 other tissues See more
