Gene Information	
Gene Official Full Name	TOX high mobility group box family member 3provided by HGNC
Also known as	CAGF9; TNRC9
Gene Description	The protein encoded by this gene contains an HMG-box, indicating that it may be involved in bending and unwinding of DNA and alteration of chromatin structure. The C-terminus of the encoded protein is glutamine-rich due to CAG repeats in the coding sequence. A minor allele of this gene has been implicated in an elevated risk of breast cancer. Two transcript variants encoding different isoforms have been found for this gene.[provided by RefSeq, Apr 2009]
Expression	Biased expression in stomach (RPKM 5.0), colon (RPKM 3.6) and 13 other tissues See more
