Gene Information	
Gene Official Full Name	charged multivesicular body protein 2B provided by HGNC
Also known as	DMT1; ALS17; VPS2B; VPS2-2; CHMP2.5; FTDALS7
Gene Description	This gene encodes a component of the heteromeric ESCRT-III complex (Endosomal Sorting Complex Required for Transport III) that functions in the recycling or degradation of cell surface receptors. ESCRT-III functions in the concentration and invagination of ubiquitinated endosomal cargos into intraluminal vesicles. The protein encoded by this gene is found as a monomer in the cytosol or as an oligomer in ESCRT-III complexes on endosomal membranes. It is expressed in neurons of all major regions of the brain. Mutations in this gene result in one form of familial frontotemporal lobar degeneration. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in thyroid (RPKM 27.4), colon (RPKM 24.7) and 25 other tissues See more
