Gene Information

Gene Official Full Name	RAS p21 protein activator 3provided by HGNC
Also known as	GAPIII; GAP1IP4BP
Gene Description	This gene encodes a protein that binds inositol 1,3,4,5-tetrakisphosphate and stimulates the GTPase activity of Ras p21. This protein functions as a negative regulator of the Ras signalling pathway. It is localized to the cell membrane via a pleckstrin homology (PH) domain in the C-terminal region. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Mar 2016]
Expression	Ubiquitous expression in fat (RPKM 14.2), lymph node (RPKM 12.1) and 25 other tissues See more
