Gene Information	
Gene Official Full Name	synergin gammaprovided by HGNC
Also known as	SYNG; AP1GBP1
Gene Description	This gene encodes a protein that interacts with the gamma subunit of AP1 clathrin-adaptor complex. The AP1 complex is located at the trans-Golgi network and associates specific proteins with clathrin-coated vesicles. This encoded protein may act to connect the AP1 complex to other proteins. Alternatively spliced transcript variants that encode different isoforms have been described for this gene. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in lymph node (RPKM 8.0), spleen (RPKM 6.7) and 25 other tissues See more
