Gene Information	
Gene Official Full Name	SWI/SNF related BAF chromatin remodeling complex subunit D2provided by HGNC
Also known as	SGD2; Rsc6p; BAF60B; CRACD2; PRO2451
Gene Description	The protein encoded by this gene is a member of the SWI/SNF family of proteins, whose members display helicase and ATPase activities and which are thought to regulate transcription of certain genes by altering the chromatin structure around those genes. The encoded protein is part of the large ATP-dependent chromatin remodeling complex SNF/SWI and has sequence similarity to the yeast Swp73 protein. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in skin (RPKM 24.5), esophagus (RPKM 18.0) and 25 other tissues See more
