Gene Information	
Gene Official Full Name	RAS like proto-oncogene Aprovided by HGNC
Also known as	RAL; HINCONS
Gene Description	The product of this gene belongs to the small GTPase superfamily, Ras family of proteins. GTP-binding proteins mediate the transmembrane signaling initiated by the occupancy of certain cell surface receptors. This gene encodes a low molecular mass ras-like GTP-binding protein that shares about 50% similarity with other ras proteins. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in esophagus (RPKM 22.0), lung (RPKM 20.7) and 25 other tissues See more
