Gene Information	
Gene Official Full Name	cystathionine gamma-lyase provided by HGNC
Also known as	CGL; CSE
Gene Description	This gene encodes a cytoplasmic enzyme in the trans-sulfuration pathway that converts cystathione derived from methionine into cysteine. Glutathione synthesis in the liver is dependent upon the availability of cysteine. Mutations in this gene cause cystathioninuria. Alternative splicing of this gene results in three transcript variants encoding different isoforms. [provided by RefSeq, Jun 2010]
Expression	Biased expression in liver (RPKM 17.3), adrenal (RPKM 4.0) and 12 other tissues See more
