Gene Information	
Gene Official Full Name	Bardet-Biedl syndrome 12provided by HGNC
Also known as	C4orf24
Gene Description	The protein encoded by this gene is part of a complex that is involved in membrane trafficking. The encoded protein is a molecular chaperone that aids in protein folding upon ATP hydrolysis. This protein also plays a role in adipocyte differentiation. Defects in this gene are a cause of Bardet-Biedl syndrome type 12. Two transcript variants encoding the same protein have been found for this gene. [provided by RefSeq, May 2010]
Expression	Broad expression in thyroid (RPKM 5.9), testis (RPKM 4.6) and 22 other tissues See more
