Gene Information	
Gene Official Full Name	ankyrin repeat and SOCS box containing 9 provided by HGNC
Gene Description	This gene encodes a member of the ankyrin repeat and suppressor of cytokine signaling (SOCS) box protein family. Members of this family can interact with the elongin B-C adapter complex via their SOCS box domain and further complex with the cullin and ring box proteins to form E3 ubiquitin ligase complexes. They may function to mediate the substrate-recognition of the E3 ubiquitin ligases. A transcribed pseudogene of this gene has been identified on chromosome 15. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Dec 2009]
Expression	Biased expression in testis (RPKM 16.8), kidney (RPKM 5.8) and 8 other tissues See more
