Gene Information	
Gene Official Full Name	neurexophilin and PC-esterase domain family member 3provided by HGNC
Also known as	FAM55C; MST115; MSTP115
Gene Description	This gene encodes a member of the neurexophilin family of neuropeptide-like glycoproteins. The encoded protein contains a variable N-terminal domain, a highly conserved neurexophilin and PC-esterase (NXPE) central domain, a short linker region, and a cysteine-rich C-terminal domain. This protein binds alpha neurexins, a group of presynaptic transmembrane receptors that promote adhesion between dendrites and axons. Alternative splicing results in multiple transcript variants. Expression	Ubiquitous expression in brain (RPKM 6.4), lymph node (RPKM 5.0) and 24 other tissues See more
