Gene Information

Gene Official Full Name	cAMP responsive element binding protein 3 like 1provided by HGNC
Also known as	Ol16; OASIS; DEL16p11.2; C16DELp11.2
Gene Description	The protein encoded by this gene is normally found in the membrane of the endoplasmic reticulum (ER). However, upon stress to the ER, the encoded protein is cleaved and the released cytoplasmic transcription factor domain translocates to the nucleus. There it activates the transcription of target genes by binding to box-B elements. [provided by RefSeq, Jun 2013]
Expression	Broad expression in stomach (RPKM 29.2), colon (RPKM 23.7) and 16 other tissues See more
