Gene Information	
Gene Official Full Name	repulsive guidance molecule BMP co-receptor aprovided by HGNC
Also known as	RGM
Gene Description	This gene encodes a member of the repulsive guidance molecule family. The encoded protein is a glycosylphosphatidylinositol-anchored glycoprotein that functions as an axon guidance protein in the developing and adult central nervous system. This protein may also function as a tumor suppressor in some cancers. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Oct 2009]
Expression	Biased expression in brain (RPKM 32.8), endometrium (RPKM 14.6) and 13 other tissues See more
