Gene Information	
Gene Official Full Name	trafficking protein particle complex subunit 2Lprovided by HGNC
Also known as	PERRB; HSPC176
Gene Description	This gene encodes a protein that interacts with the tethering factor trafficking protein particle (TRAPP complex). TRAPP complexes mediate the contact between vesicles and target membranes, and thus, are involved in vesicle-mediated transport of proteins and lipids. The encoded protein is related to the X-linked trafficking protein particle complex 2. A related pseudogene is located on the X chromosome. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Jan 2016]
Expression	Ubiquitous expression in adrenal (RPKM 16.3), testis (RPKM 13.9) and 25 other tissues See more
