Gene Information	
Gene Official Full Name	ankyrin repeat domain 12provided by HGNC
Also known as	ANCO1; GAC-1; ANCO-2; Nbla00144
Gene Description	This gene encodes a member of the ankyrin repeats-containing cofactor family. These proteins may inhibit the transcriptional activity of nuclear receptors through the recruitment of histone deacetylases. The encoded protein interacts with p160 coactivators and also represses transcription mediated by the coactivator alteration/deficiency in activation 3 (ADA3). Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided by RefSeq, Feb 2011]
Expression	Ubiquitous expression in lymph node (RPKM 9.0), appendix (RPKM 8.8) and 25 other tissues See more
