Gene Information	
Gene Official Full Name	G-patch domain containing 8provided by HGNC
Also known as	GPATC8; KIAA0553
Gene Description	The protein encoded by this gene contains an RNA-processing domain, a zinc finger domain, a lysine-rich region and a serine-rich region. A mutation in the serine-rich region of the protein is thought to be associated with hyperuricemia (PMID: 21594610). Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Feb 2015]
Expression	Ubiquitous expression in testis (RPKM 2.5), ovary (RPKM 2.5) and 25 other tissues See more
