Gene Information	
Gene Official Full Name	DEPP autophagy regulator 1provided by HGNC
Also known as	FIG; DEPP; Fseg; C10orf10
Gene Description	The expression of this gene is induced by fasting as well as by progesterone. The protein encoded by this gene contains a t-synaptosome-associated protein receptor (SNARE) coiled-coil homology domain and a peroxisomal targeting signal. Production of the encoded protein leads to phosphorylation and activation of the transcription factor ELK1. [provided by RefSeq, Jul 2008]
Expression	Broad expression in fat (RPKM 86.3), endometrium (RPKM 51.4) and 24 other tissues See more
