Gene Information	
Gene Official Full Name	period circadian regulator 3provided by HGNC
Also known as	GIG13; FASPS3
Gene Description	This gene is a member of the Period family of genes and is expressed in a circadian pattern in the suprachiasmatic nucleus, the primary circadian pacemaker in the mammalian brain. Genes in this family encode components of the circadian rhythms of locomotor activity, metabolism, and behavior. This gene is upregulated by CLOCK/ARNTL heterodimers but then represses this upregulation in a feedback loop using PER/CRY heterodimers to interact with CLOCK/ARNTL. Polymorphisms in this gene have been linked to sleep disorders. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jan 2014]
Expression	Ubiquitous expression in thyroid (RPKM 14.6), fat (RPKM 11.2) and 24 other tissues See more
