Gene Information	
Gene Official Full Name	Wnt family member 7Bprovided by HGNC
Gene Description	This gene is a member of the WNT gene family, which consists of structurally related genes that encode secreted signaling proteins. These proteins have been implicated in oncogenesis and in several developmental processes, including regulation of cell fate and patterning during embryogenesis. Among members of the human WNT family, this gene product is most similar to WNT7A protein. [provided by RefSeq, Oct 2008]
Expression	Biased expression in skin (RPKM 7.3), urinary bladder (RPKM 3.8) and 6 other tissues See more
