Gene Information	
Gene Official Full Name	pericentriolar material 1provided by HGNC
Also known as	PTC4; RET/PCM-1
Gene Description	The protein encoded by this gene is a component of centriolar satellites, which are electron dense granules scattered around centrosomes. Inhibition studies show that this protein is essential for the correct localization of several centrosomal proteins, and for anchoring microtubules to the centrosome. Chromosomal aberrations involving this gene are associated with papillary thyroid carcinomas and a variety of hematological malignancies, including atypical chronic myeloid leukemia and T-cell lymphoma. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Oct 2015]
Expression	Broad expression in testis (RPKM 47.5), thyroid (RPKM 18.5) and 25 other tissues See more
