Gene Information	
Gene Official Full Name	lipase A, lysosomal acid typeprovided by HGNC
Also known as	LAL; CESD
Gene Description	This gene encodes lipase A, the lysosomal acid lipase (also known as cholesterol ester hydrolase). This enzyme functions in the lysosome to catalyze the hydrolysis of cholesteryl esters and triglycerides. Mutations in this gene can result in Wolman disease and cholesteryl ester storage disease. Alternatively spliced transcript variants have been found for this gene. [provided by RefSeq, Jan 2014]
Expression	Broad expression in spleen (RPKM 177.6), small intestine (RPKM 113.4) and 21 other tissues See more
