Gene Information	
Gene Official Full Name	karyopherin subunit alpha 3provided by HGNC
Also known as	SRP1; SRP4; IPOA4; SPG88; hSRP1; SRP1gamma
Gene Description	The transport of molecules between the nucleus and the cytoplasm in eukaryotic cells is mediated by the nuclear pore complex (NPC), which consists of 60-100 proteins. Small molecules (up to 70 kD) can pass through the nuclear pore by nonselective diffusion while larger molecules are transported by an active process. The protein encoded by this gene belongs to the importin alpha family, and is involved in nuclear protein import. [provided by RefSeq, Jan 2009]
Expression	Ubiquitous expression in testis (RPKM 17.5), brain (RPKM 15.2) and 25 other tissues See more
