Gene Information	
Gene Official Full Name	guanylate binding protein 3provided by HGNC
Gene Description	This gene encodes a member of the guanylate-binding protein (GBP) family. GBPs specifically bind guanine nucleotides (GMP, GDP, and GTP) and contain two of the three consensus motifs found in typical GTP-binding proteins. The encoded protein interacts with a member of the germinal center kinase family. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jan 2017]
Expression	Broad expression in duodenum (RPKM 41.6), small intestine (RPKM 35.5) and 23 other tissues See more
