Gene Information	
Gene Official Full Name	EYA transcriptional coactivator and phosphatase 2provided by HGNC
Also known as	EAB1
Gene Description	This gene encodes a member of the eyes absent (EYA) family of proteins. The encoded protein may be post-translationally modified and may play a role in eye development. A similar protein in mice can act as a transcriptional activator. Alternative splicing results in multiple transcript variants, but the full-length natures of all of these variants have not yet been determined. [provided by RefSeq, Jul 2009]
Expression	Broad expression in endometrium (RPKM 9.8), prostate (RPKM 9.3) and 17 other tissues See more
