Gene Information	
Gene Official Full Name	calpain 5provided by HGNC
Also known as	VRNI; ADNIV; HTRA3; nCL-3
Gene Description	Calpains are calcium-dependent cysteine proteases involved in signal transduction in a variety of cellular processes. A functional calpain protein consists of an invariant small subunit and 1 of a family of large subunits. CAPN5 is one of the large subunits. Unlike some of the calpains, CAPN5 and CAPN6 lack a calmodulin-like domain IV. Because of the significant similarity to Caenorhabditis elegans sex determination gene tra-3, CAPN5 is also called as HTRA3. [provided by RefSeq, Jul 2008]
Expression	Broad expression in colon (RPKM 33.5), duodenum (RPKM 28.3) and 19 other tissues See more
