Gene Information	
Gene Official Full Name	centrosomal protein 41provided by HGNC
Also known as	JBTS15; TSGA14
Gene Description	This gene encodes a centrosomal and microtubule-binding protein which is predicted to have two coiled-coil domains and a rhodanese domain. In human retinal pigment epithelial cells the protein localized to centrioles and cilia. Mutations in this gene have been associated with Joubert Syndrome 15; an autosomal recessive ciliopathy and neurological disorder. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Mar 2012]
Expression	Broad expression in testis (RPKM 5.8), salivary gland (RPKM 3.3) and 23 other tissues See more
