Gene Information	
Gene Official Full Name	SET domain bifurcated histone lysine methyltransferase 2provided by HGNC
Also known as	CLLD8; CLLL8; KMT1F; C13orf4
Gene Description	This gene encodes a member of a family of proteins that contain a methyl-CpG-binding domain (MBD) and a SET domain and function as histone methyltransferases. This protein is recruited to heterochromatin and plays a role in the regulation of chromosome segregation. This region is commonly deleted in chronic lymphocytic leukemia. Naturally-occurring readthrough transcription occurs from this gene to the downstream PHF11 (PHD finger protein 11) gene. Alternative splicing results in multiple transcript variants. Expression	Ubiquitous expression in testis (RPKM 6.5), lymph node (RPKM 5.5) and 25 other tissues See more
