Gene Information	
Gene Official Full Name	cysteine and serine rich nuclear protein 2provided by HGNC
Also known as	C12orf2; PPP1R72; TAIP-12; C12orf22; FAM130A1
Gene Description	The protein encoded by this gene belongs to the CSRNP family of nuclear proteins that share conserved regions, including cysteine- and serine- rich regions, a basic domain, a transcriptional activation domain, and bind the sequence 'AGAGTG', thus have the hallmark of transcription factors. Studies in mice suggest that these genes may have redundant functions. Alternatively spliced transcript variants have been found for this gene. [provided by RefSeq, Aug 2011]
