Gene Information	
Gene Official Full Name	ENAH actin regulatorprovided by HGNC
Also known as	ENA; MENA; NDPP1
Gene Description	This gene encodes a member of the enabled/ vasodilator-stimulated phosphoprotein. Members of this gene family are involved in actin-based motility. This protein is involved in regulating the assembly of actin filaments and modulates cell adhesion and motility. Alternate splice variants of this gene have been correlated with tumor invasiveness in certain tissues and these variants may serve as prognostic markers. A pseudogene of this gene is found on chromosome 3. [provided by RefSeq, Sep 2016]
Expression	Ubiquitous expression in gall bladder (RPKM 8.3), prostate (RPKM 7.8) and 24 other tissues See more
