Gene Information	
Gene Official Full Name	opsin 3provided by HGNC
Also known as	ECPN; PPP1R116
Gene Description	Opsins are members of the guanine nucleotide-binding protein (G protein)-coupled receptor superfamily. In addition to the visual opsins, mammals possess several photoreceptive non-visual opsins that are expressed in extraocular tissues. This gene, opsin 3, is strongly expressed in brain and testis and weakly expressed in liver, placenta, heart, lung, skeletal muscle, kidney, and pancreas. The gene may also be expressed in the retina. The protein has the canonical features of a photoreceptive opsin protein. [provided by RefSeq, Jul 2008]
Expression	Broad expression in placenta (RPKM 19.5), lung (RPKM 11.0) and 24 other tissues See more
