Gene Information	
Gene Official Full Name	CDC42 binding protein kinase alphaprovided by HGNC
Also known as	MRCK; MRCKA; PK428; MRCKalpha
Gene Description	The protein encoded by this gene is a member of the serine/threonine protein kinase family. This kinase contains multiple functional domains. Its kinase domain is highly similar to that of the myotonic dystrophy protein kinase (DMPK). This kinase also contains a Rac interactive binding (CRIB) domain, and has been shown to bind CDC42. It may function as a CDC42 downstream effector mediating CDC42 induced peripheral actin formation, and promoting cytoskeletal reorganization. Multiple alternatively spliced transcript variants have been described. [provided by RefSeq, Sep 2018]
Expression	Ubiquitous expression in testis (RPKM 11.8), kidney (RPKM 9.4) and 25 other tissues See more
