Gene Information	
Gene Official Full Name	solute carrier family 2 member 1provided by HGNC

Gene Description	This gene encodes a major glucose transporter in the mammalian blood-brain barrier. The encoded protein is found primarily in the cell membrane and on the cell surface, where it can also function as a receptor for human T-cell leukemia virus (HTLV) I and II. Mutations in this gene have been found in a family with paroxysmal exertion-induced dyskinesia. [provided by RefSeq, Apr 2013]
Expression	Biased expression in placenta (RPKM 289.6), skin (RPKM 60.0) and 6 other tissues See more
