Gene Information	
Gene Official Full Name	proteolipid protein 2provided by HGNC
Also known as	A4; A4LSB
Gene Description	This gene encodes an integral membrane protein that localizes to the endoplasmic reticulum in colonic epithelial cells. The encoded protein can multimerize and may function as an ion channel. A polymorphism in the promoter of this gene may be linked to an increased risk of X-linked cognitive disability. A pseudogene of this gene is found on chromosome 5. [provided by RefSeq, Jan 2010]
Expression	Ubiquitous expression in skin (RPKM 154.7), esophagus (RPKM 126.0) and 23 other tissues See more
