Gene Information	
Gene Official Full Name	pyruvate dehydrogenase kinase 1provided by HGNC
Gene Description	Pyruvate dehydrogenase (PDH) is a mitochondrial multienzyme complex that catalyzes the oxidative decarboxylation of pyruvate and is one of the major enzymes responsible for the regulation of homeostasis of carbohydrate fuels in mammals. The enzymatic activity is regulated by a phosphorylation/dephosphorylation cycle. Phosphorylation of PDH by a specific pyruvate dehydrogenase kinase (PDK) results in inactivation. Multiple alternatively spliced transcript variants have been found for this gene. [provided by RefSeq, Jun 2013]
Expression	Ubiquitous expression in heart (RPKM 4.7), adrenal (RPKM 4.3) and 25 other tissues See more
