Gene Information	
Gene Official Full Name	fibroblast growth factor 11provided by HGNC
Also known as	FHF3; FHF-3; FGF-11
Gene Description	The protein encoded by this gene is a member of the fibroblast growth factor (FGF) family. FGF family members possess broad mitogenic and cell survival activities, and are involved in a variety of biological processes, including embryonic development, cell growth, morphogenesis, tissue repair, tumor growth and invasion. The function of this gene has not yet been determined. The expression pattern of the mouse homolog implies a role in nervous system development. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jan 2015]
Expression	Broad expression in adrenal (RPKM 9.9), skin (RPKM 7.0) and 14 other tissues See more
