Gene Information	
Gene Official Full Name	zinc finger and BTB domain containing 42provided by HGNC
Also known as	LCCS6; ZNF925
Gene Description	The protein encoded by this gene is a member of the C2H2 zinc finger protein family. This protein is predicted to have a pox virus and zinc finger (POZ) domain at the N-terminus and four zinc finger domains at the C-terminus. In human and mouse, the protein localizes to the nuclei of skeletal muscle cells. Knockdown of this gene in zebrafish results in abnormal skeletal muscle development and myofibrillar disorganization. A novel homozygous variant of the human gene has been associated with lethal congenital contracture syndrome, an autosomal recessive disorder that results in muscle wasting. Expression	Ubiquitous expression in prostate (RPKM 4.4), lung (RPKM 3.3) and 24 other tissues See more
