Gene Information	
Gene Official Full Name	zinc finger protein 431provided by HGNC
Also known as	ZFP932
Gene Description	This gene encodes a member of the Krueppel C2H2-type zinc-finger family of proteins. The encoded protein may negatively regulate transcription of target genes, including the hedgehog signaling pathway receptor patched 1, by interacting with histone deacetylases. Mutations in this gene may be associated with non-syndromic facial clefting in human patients. [provided by RefSeq, Jul 2016]
Expression	Ubiquitous expression in ovary (RPKM 3.5), thyroid (RPKM 3.0) and 24 other tissues See more
