Gene Information	
Gene Official Full Name	zinc finger protein 467provided by HGNC
Also known as	EZI; Zfp467
Gene Description	The protein encoded by this gene is a zinc finger protein whose function has not yet been elucidated in humans. However, the mouse ortholog of this protein enhances adipocyte differentiation and suppresses osteoblast differentiation in bone marrow. The mouse protein also is a transcription factor for several genes and can help recruit histone deacetylase complexes. [provided by RefSeq, Aug 2016]
Expression	Ubiquitous expression in spleen (RPKM 2.9), kidney (RPKM 2.5) and 25 other tissues See more
