Gene Information	
Gene Official Full Name	zinc finger protein 681provided by HGNC
Gene Description	This gene encodes a protein containing the krueppel associated box (KRAB) and zinc-finger domains, which may be involved in transcriptional regulation. Non-functional alleles of this gene are present in alternate genome assemblies including T2T-CHM13v1.1, resulting from a 'TG' deletion (rs61397759) which causes a frameshift and a premature stop codon. [provided by RefSeq, Sep 2022]
Expression	Ubiquitous expression in brain (RPKM 1.3), lymph node (RPKM 1.2) and 24 other tissues See more
