Gene Information	
Gene Official Full Name	PR/SET domain 10provided by HGNC
Also known as	BHD2; PFM7; TRIS
Gene Description	The protein encoded by this gene is a transcription factor that contains C2H2-type zinc-fingers. It also contains a positive regulatory domain, which has been found in several other zinc-finger transcription factors including those involved in B cell differentiation and tumor suppression. Studies of the mouse counterpart suggest that this protein may be involved in the development of the central nerve system (CNS), as well as in the pathogenesis of neuronal storage disease. Multiple alternatively spliced transcript variants encoding distinct isoforms have been observed. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in skin (RPKM 1.6), lymph node (RPKM 1.5) and 25 other tissues See more
