Gene Information	
Gene Official Full Name	obscurin like cytoskeletal adaptor 1provided by HGNC
Gene Description	Cytoskeletal adaptor proteins function in linking the internal cytoskeleton of cells to the cell membrane. This gene encodes a cytoskeletal adaptor protein, which is a member of the Unc-89/obscurin family. The protein contains multiple N- and C-terminal immunoglobulin (Ig)-like domains and a central fibronectin type 3 domain. Mutations in this gene cause 3M syndrome type 2. Alternatively spliced transcript variants encoding different isoforms have been found in this gene. [provided by RefSeq, Mar 2010]
Expression	Broad expression in ovary (RPKM 37.4), testis (RPKM 15.3) and 19 other tissues See more
