Gene Information	
Gene Official Full Name	target of myb1 membrane trafficking proteinprovided by HGNC
Also known as	IMD85
Gene Description	This gene was identified as a target of the v-myb oncogene. The encoded protein shares its N-terminal domain in common with proteins associated with vesicular trafficking at the endosome. It is recruited to the endosomes by its interaction with endofin. Several alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Oct 2008]
Expression	Ubiquitous expression in bone marrow (RPKM 24.4), esophagus (RPKM 24.1) and 25 other tissues See more
